

CARE OF RABBITS

DIET

Hay: The wild rabbit lives on a diet of grasses and leaves and has a specialised gut which is adapted for this; the large intestine contains bacteria which break down the grass to make it digestible. The adult rabbit needs a diet high in fibre with restricted carbohydrate and protein and virtually no fat to stay healthy. Rabbits must have 24 hour access to loose hay (not cubes). We strongly recommend TIMOTHY hay as this is higher in fiber than Alfalfa. It is very important to check that the hay is of good quality. It should have a fresh sweet smell, not dusty or mouldy.

Pellets: We recommend that an adult rabbit be given one dessertspoon of pellets per kg weight of rabbit a day, this can be split into two meals. Young (under 6 months), pregnant, sick or old (over 6 years) rabbits should be given free access to pellets.

When buying food ensure that it is fresh (always check the expiry date) and keep the food in airtight containers and away from heat.

Fresh vegetables: These are an important source of vitamins. Around 1-2 bowls should be given everyday. Carrots tops, broccoli, romaine and Chinese lettuce are good. Chinese “Choi” and spinach can be given once a week. Remember to wash thoroughly and make sure they are fresh.

Any dietary changes **MUST** be slow and gentle. Upsetting the gut causes bacterial imbalances which can have serious consequences (even death). Take up to 1 week to gradually introduce a new vegetable or hay or brand of pellets to your rabbit. Please note rabbit’s teeth grow continuously and need to be constantly worn down to prevent overgrowth which leads to pain, oral inflammation/ulceration and loss of appetite. Gut stasis (lack of gut movement) is a serious problem so seek veterinary advice if a rabbit does not eat or poo for 24 hours or has abnormal faeces (such as diarrhoea or constipation).

WATER

24 hour access is essential. Offer water in a bowl and a dripper bottle so the rabbit can choose which they prefer

CAGE

The cage should be a minimum of 6ft x 2ft x2ft. The floor of the cage should be solid and easy to clean, not wire (as this may cause ulceration of the feet). Of course you must keep the cage clean and dry. Ideally the cage should have a covered area where the rabbit can have privacy and an open area (rabbits live under the ground and feel safe in dark areas). Rabbits should be allowed out of the cage to exercise every day, but “rabbit proof” your house first; make sure there are no electric wires they can chew.

HEALTH

To keep your rabbit healthy please follow the above advice. In addition please check your rabbit’s mouth (for a wet chin and teeth grinding which can be signs of oral disease) and feet (for infection and ulceration) regularly. Also keep the anal/genital area clean to prevent faecal matting/ urine scald and infection. Brush them frequently especially when they are molting (daily if long haired) to prevent matting and skin disease. Any abnormal hairloss please seek veterinary attention. We advise desexing all female rabbits as they are prone to cancer of the uterus and mammary glands. A single male can be left entire but if more than one male they may fight. Finally check you rabbit for any skin lumps as abscesses are common in rabbits and are difficult to treat. Excellent information can be found on the internet www.rabbitwelfare.co.uk

兔子護理

糧食

乾草：在野外生活的兔子依靠食草葉以維持生命，因此牠們的腸道有特別的構造去適應此類食物。牠們倚賴大腸內的細菌去消化及分解纖維從而獲得營養。成年兔子需要進食高纖維、低碳水化合物、低蛋白質及基本上無脂肪的食物。飼主需確保兔子隨時進食到零散乾草（不要草磚）。我們建議餵飼Timothy草，因為它的纖維含量較Alfafa草為高。另外要確保餵飼高質素的乾草，它們應有一股新鮮的草香。若乾草發出塵味或霉味便應棄掉。

兔糧：我們建議給予成年兔子每日小量的乾兔糧。每一公斤重的兔子每日可餵飼一甜品匙兔糧（可分兩餐餵飼）。飼主應給予年幼（六個月大或以下）、懷孕、生病或年長（六歲以上）的兔子足夠兔糧供牠們隨時進食。購買兔糧時務必檢查有效日期，並應將兔糧存放於陰涼處及密封容器內。

新鮮蔬菜：新鮮蔬菜是多種維他命的來源，飼主每天可給予一至兩碗。紅蘿蔔、西蘭花、唐生菜、羅馬生菜等都是好選擇。中式菜及菠菜可以一星期給予1次。食用前緊記徹底地清潔蔬菜及確保蔬菜新鮮。

所有食物上的轉換均必須慢慢進行，否則會引致腸道細菌失衡，並可以帶來嚴重後果，最嚴重者可導致死亡。一般來說轉換不同品牌的乾糧、不同種類的蔬菜或乾草需分一星期漸漸進行。另外需注意的是兔子的牙齒會不斷生長。牠們需要不停咀嚼磨短牙齒，以防止牙齒生過長。牙齒過長的話會導致牙肉發炎或癢癢、痛楚及失去食慾。此外腸道瘀積（腸道蠕動不足）乃另一種嚴重問題。如發現兔子多於廿四小時未有進食或排便或出現不正常大便（如腹瀉或便秘），請即求診。

食水

要確保兔子24小時都有潔淨的食水供應。可同時提供水碗和水樽讓兔子選擇。

籠子

籠的大小最少為六尺乘兩尺乘兩尺。籠底要密閉及容易清洗。籠底不應用任何類型的網狀或鐵線，因容易傷及兔子足部引致癢癢。籠子要盡量保持乾爽清潔。如果可以應在籠裏的一邊提供遮蓋使兔子有地方可以躲起來及感覺安全。兔子每天應放出籠外活動，但應小心家居內的東西，例如：電線。以避免兔子誤咬及誤吞。

健康

除了跟隨以上各項建議，你亦應該：

- 定期檢查牙齒及口腔 – 面頰濕潤或牙齒磨蝕可能與口腔問題有關
- 定期檢查腳部 – 檢查有沒有受傷及受細菌感染而膿腫
- 保持肛門及下陰部清潔，防止因大小便積聚而引起的感染
- 定期梳毛，尤其是長毛種的及換毛期間，以防止毛髮打結及患上皮膚病
- 兔子繁殖力驚人，故應為兔子絕育。除此之外，為雌兔絕育可預防牠們患上子宮及乳癌。為雄性絕育可防止牠們打架。
- 定期檢查皮膚 – 皮膚腫瘤可以由膿瘡引起。此類膿瘡在兔子身上頗常見但難於治理
